KEN ZIN

During over 13 years at Ampex Video Division, I became thoroughly familiar with the workmanship and abilities of most electronic and mechanical technicians.

It is my opinion that Ken Zin's work is equal to the best that I have seen in both electronic and mechanical areas. Very few technicians show this much ability in either area of competence and almost none are this competent in both.

His work is thorough and accurate, and shows superior workmanship and attention to detail. He understands and follows instructions well, and exercises good judgment in undefined areas. Because he is a perfectionist, his experience is of a deeper extent than could otherwise be obtained.

The equipment which Ken maintains covers an unusually wide range. It includes broadcast quadruplex color recorder equipment and also several models of each closed circuit recorder of any significance in the industry, plus Memorex-designed test gear.

The equipment which Ken maintains is in use 24 hours a day, resulting in a very high workload and responsibility for one technician to maintain, in addition to building and modifying test gear.
